*Supporting property owners to help achieve France's objective of 12.4 kgCO₂e/m² per year by 2030 (CRREM FR, 2021 version): decarbonization will require the mobilization of all stakeholders, and the commitment of every property owner, working in synergy with local companies, public policy incentives and the structuring of an efficient building sector.

** Supporting the agricultural sector in its decarbonization process while strengthening food sovereignty, helping to implement the roadmaps set by the profession and its sectors, at individual farm level and for the entire French farming sector.

(1) For the Aviation sector, 2019 was used as the reference year, as 2020 was not representative of actual customer activity due to the Covid pandemic.
